145 Prepped

How we take every used car from arrival to forecourt-ready. Tick each job as you finish it, and everyone can see where every car is.

Getting started · Who does what · The six stages · Finding a car · Department boxes · Working on a car · 145 checks · Adding cars · QR and notices · Completed · Administrators · Help

↑ Contents

DAY ONE

Getting started

1. Go to www.145prepped.co.uk on your phone, tablet or computer.
2. Sign in with the username and starting password your manager gave you.
3. Change your password straight away: tap **Account**, fill in **Change password**, then **Save new password**.
4. Add it to your phone's home screen so it opens like an app. On iPhone (Safari) tap Share, then **Add to Home Screen**. On Android (Chrome) tap the three-dot menu, then **Install app**.

Kinds of login

- **Staff** add cars, tick off prep, upload 145 point checks, write notes, print QR stickers and archive completed cars.
- **Technician** logins see every car but can only tick their own job: **Valet Technician** (Valet and Photos), **Paint Technician**, **Alloy Technician** (who can also set how many wheels need refining) and **Dent Technician**.
- **Advisors** can look but not change anything, for example after scanning a car's QR sticker.
- **Administrators** can do everything staff can, plus Reports, deleting cars and managing staff logins.

↑ Contents

YOUR PART

Who does what

Each team works on its own stage. Tap your department's box under **How prep is going** to see only the cars waiting for you.

Managers controlling preparation

All stages

ADMINISTRATOR LOGIN

Add cars and check the ones that arrive by email, set Prep requested, chase cars over 7 days, use Reports and Outstanding bodywork, archive completed cars, print notices and manage logins.

Workshop controllers

Mechanical

STAFF LOGIN

Upload the 145 point check, tick Service, MOT passed and Mechanical QC, check the MOT date, and note any parts on order.

Painters

Paint

PAINT TECHNICIAN LOGIN

Your list opens on cars still needing paint. Read the cosmetic notes, then tick **Paint work completed**. Everything else is view only.

Alloy technicians

Alloys

ALLOY TECHNICIAN LOGIN

Your list opens on cars still needing alloys. Set how many wheels need refining, then tick **Alloy wheels completed**.

Dent technicians

Dents

DENT TECHNICIAN LOGIN

Your list opens on cars still needing dents. Tick **Dents completed** when the repair is done.

Bodywork controller

Bodywork

STAFF LOGIN

Write the cosmetic notes, tick **Cosmetic check complete**, and tick **QC complete** once paint, dents and alloys are done (it adds your initials).

Valet technicians

Valet & Photos

VALET TECHNICIAN LOGIN

Your list opens on cars still needing a valet. Tick **Valet completed** when the valet is done, and **Photographs completed** when the photos are done. Everything else is view only.

Photographers

Photos

STAFF OR VALET TECHNICIAN LOGIN

Tick **Photographs completed** when the photos are done.

The final **Quality check completed** box is ticked by whoever signs the car off as forecourt-ready, usually a manager.

THE PREP LINE

The six stages

Every car goes through the same six stages in order. A stage finishes when all its boxes are ticked, and the car moves on by itself. The bar on each car card shows this line.

1 Inbound

MANAGERS

- Advertised on Auto Trader
- Preparation lines requested
- QR sticker fitted

2 Valet

VALETERS

- Valet completed

3 Photos

PHOTOGRAPHERS

- Photographs completed

4 Mechanical

WORKSHOP

- 145 point check (upload)
- Service
- MOT passed
- Mechanical QC complete

5 Bodywork

PAINT, ALLOYS, DENTS

- Cosmetic check complete, with notes
- Dents completed
- Alloy wheels completed
- Paint work completed
- QC complete (initials)

6 Quality Check

MANAGERS

- Quality check completed (initials)

↑ Contents

HOME SCREEN

Finding a car

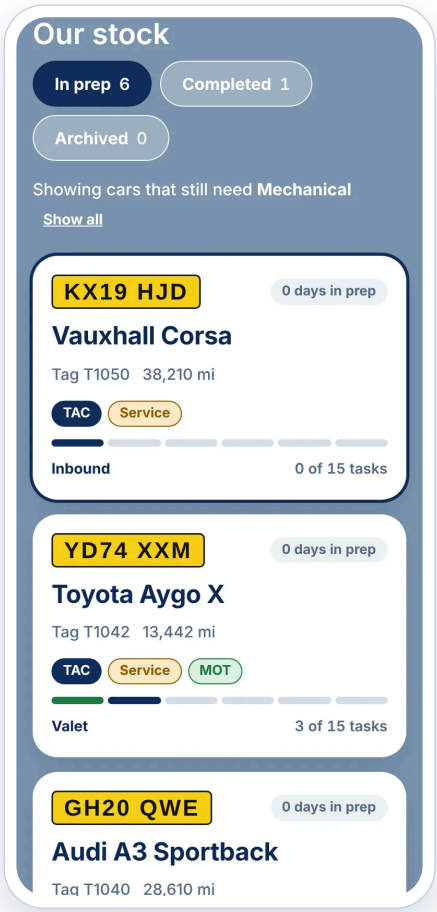

The stock is split into three tabs. Tap any car card to open it.

- **In prep**: cars still being worked on.
- **Completed**: cars with every box ticked, including the final quality check.
- **Archived**: cars moved out of the way.

To find any car, type a registration, tag number, make or model into **Search our stock** and tap **Search**. It looks through every car, including Completed and Archived, and labels each result. Tap **Clear search** to go back.

Each card shows the registration (YD74 XXM), days in prep, the prep requested (TAC Service MOT), the six-stage bar and how many of the 15 tasks are done.

How prep is going shows cars in prep, cars completed, and the average days in prep against the 7-day target.

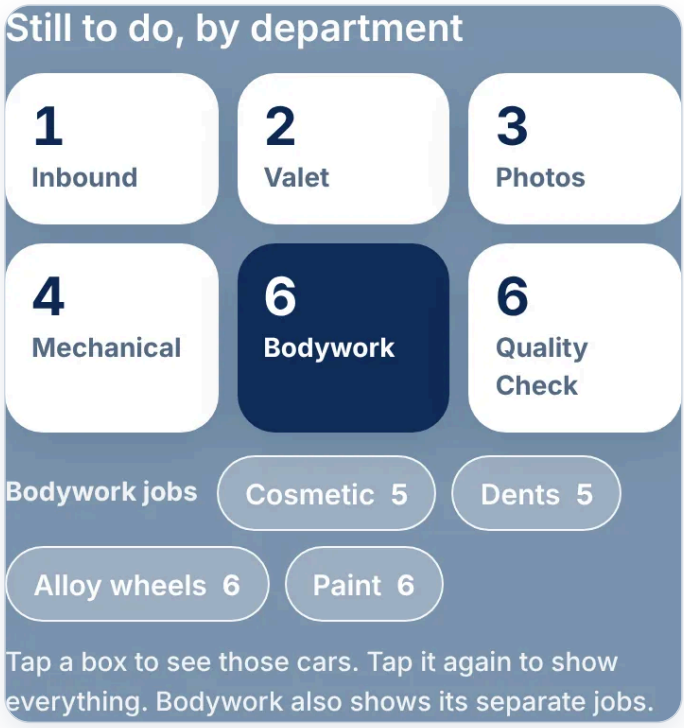

↑ Contents

HOME SCREEN

Department boxes

Under **How prep is going**, **Still to do, by department** shows a box for each department with the number of cars that still need it.

- A car counts in **every** department it still needs, whatever stage it has reached. A car at Valet with its mechanical boxes unticked counts under Mechanical too.
- Tap **Bodywork** and the **Bodywork jobs** buttons open underneath, counting cars still needing Dents, Alloy wheels and Paint. Tap one to go straight to that job; tap it again to go back to all Bodywork.
- Tap a box to show only those cars. The box turns navy and the stock list says what you are viewing.
- Tap the box again, or tap **Show all**, to see every car.

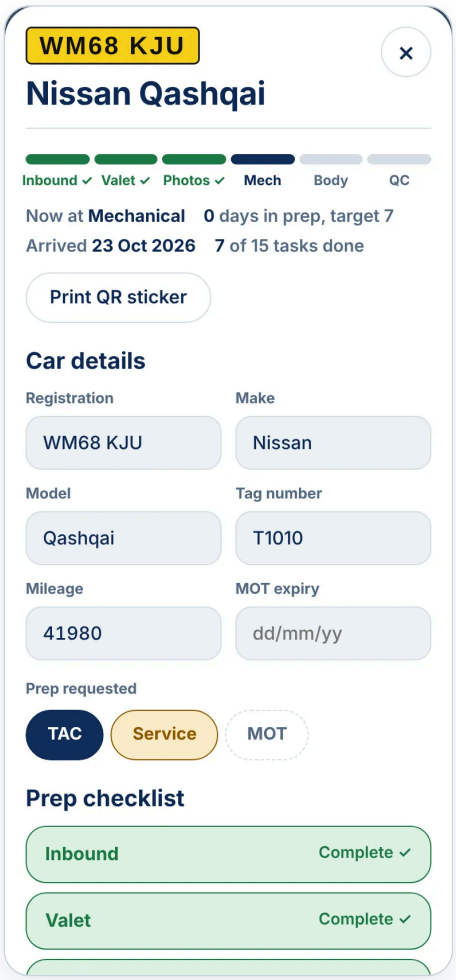

↑ Contents

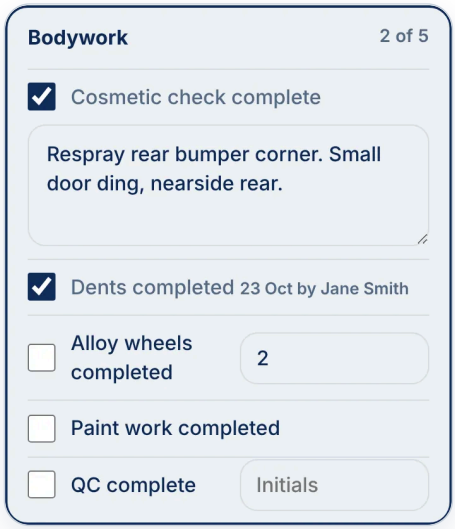

THE CAR SHEET

Working on a car

Open the car and tick each job as it is done. Everything saves as you type or tick, so there is no Save button.

- **Stage bar**: green ticks are finished stages; the dark segment is where the car is now.
- **Sign-offs**: ticking Bodywork **QC complete** or the final **Quality check completed** adds your initials and the date.
- **Who and when**: every ticked box shows the date and the person who ticked it.
- **Car details**: correct the registration, make, model, tag, mileage or MOT expiry at the top. Type the MOT date as digits, for example `250527`, and it becomes 25/05/27.
- **Check MOT** (managers, staff and advisors): the button next to MOT expiry looks the car up with the DVSA, updates the expiry and opens the car's full MOT history: every test with pass or fail, mileage and each advisory or defect. A mileage lower than the test before shows in red. Tap it again to hide the history.
- **Notes**: faults, parts on order, who has the keys.

When all prep is done, the car waits at **Quality Check** (it shows in the Quality Check department box). Once the final **Quality check completed** box is ticked, it moves to the **Completed** tab by itself.

↑ Contents

MECHANICAL AND BODYWORK

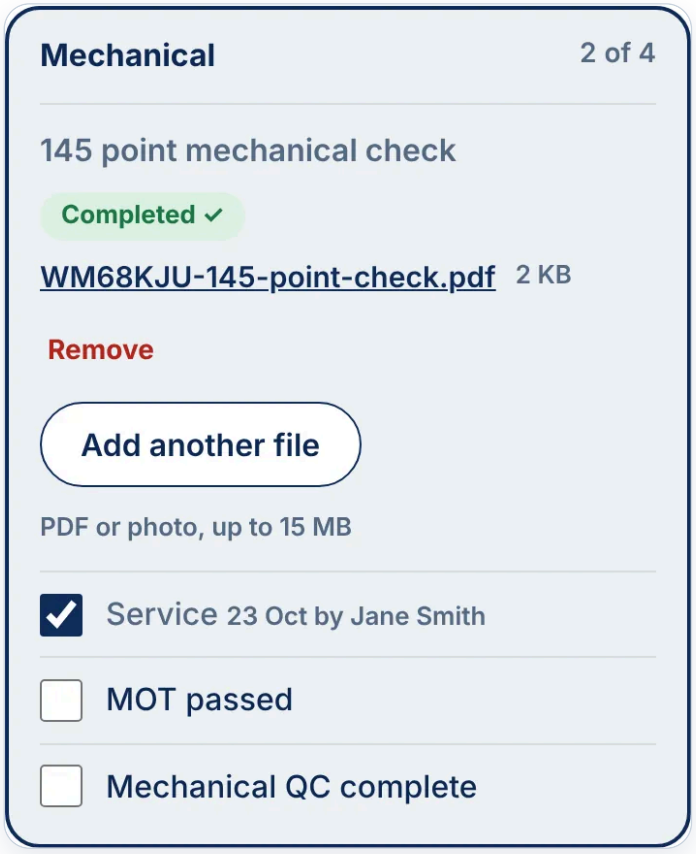

145 point checks and cosmetic notes

145 point mechanical check

This is done by uploading the paperwork, not by ticking a box.

1. Open the car and go to **Mechanical**.
2. Tap **Upload check** and choose a PDF or take a photo (JPEG, PNG, WebP or HEIC, up to 15 MB).
3. The row changes to Completed ✓ with the file name.

Large PDFs are made smaller automatically to save space. Tap **Add another file** for extra pages, up to 10 per car. To remove a file tap **Remove**, then **Tap again to remove**. Removing the last file sets the check back to Needs upload.

Cosmetic notes and wheels

Under **Cosmetic check complete** on the Bodywork stage, write what cosmetic work the car needs, for example "respray rear bumper, door ding nearside". Tick the box when the check is done.

Next to **Alloy wheels completed**, enter how many alloys need refining (0 to 5).

Under the notes, build a **Cosmetic estimate**: choose a repair from the list (for example Bumper Corner or Touch-in), set how many, and tap **Add**. The estimate shows the total time and internal cost. Technicians see the repairs and hours but not prices.

> The estimate sets the bodywork jobs for you. Add a **Dent** line and the Dents job shows how many; leave it off and Dents is ticked as **Not needed**. Alloy lines (Alloy Wheel, Diamond Cut Alloy, Painted Alloy) set the wheels to refine the same way. Everything else on the estimate goes to the Cosmetics list. If a Dent or alloy line is added later, or the estimate is cleared, the job goes back to a normal box to tick.

The notes and wheel counts feed the **Outstanding bodywork** lists in Reports, so painters and managers can see every job by tag number.

Outstanding bodywork

Alloys 2 | Cosmetics 2

Paint and cosmetic work

2 cars with notes and paint work not yet done. Cars whose notes mention paint are listed first.

T1009 Paint
PO71 GTR Toyota Yaris

Paint touch-in on bonnet stone chips.

T1031 Paint
LK21 ZXA Ford Fiesta

Respray rear bumper corner. Small door ding, nearside rear.

NEW STOCK

Adding cars

By hand

Tap **Add car** and type the registration. Tap **Look up** (or just move to the next box) and the make, model, colour and MOT expiry fill in from the DVLA. Check them, add the tag number and mileage, tap the **Prep requested** buttons that apply, then **Add to prep**. The car starts at Inbound.

New cars, including ones added by email, are checked with the DVSA straight away, and every car in prep is re-checked each morning, so a new MOT updates the card by itself. If the MOT runs out within 6 months, **MOT** is added to Prep requested for you, the card shows a red **MOT due** tag, and a note under Prep requested says when it runs out. The warning goes once **MOT passed** is ticked under Mechanical. If it isn't needed, tap MOT to take it off and it stays off.

By email

Send the car's details to the 145 Prepped email-in address (your manager has it). The car appears at Inbound within a minute with the note "Added from email. Check the details are right." Put each detail on its own line:

To: 145 Prepped email-in address Subject: anything

```
TOYOTA
AYGO X
YD74XXM
TAG T1042
TAC
SERVICE
MOT - 25/05/2027
MILEAGE 13442
```

- Put the number on the TAG line, for example `TAG T1042`. A TAG line with no number brings in no tag.
- TAC, SERVICE and MOT lines fill **Prep requested**. An MOT line with a date also sets the MOT expiry.
- A registration already on the system, including completed and archived cars, is skipped rather than duplicated.

Always open a car added by email and check its details.

ON THE CAR

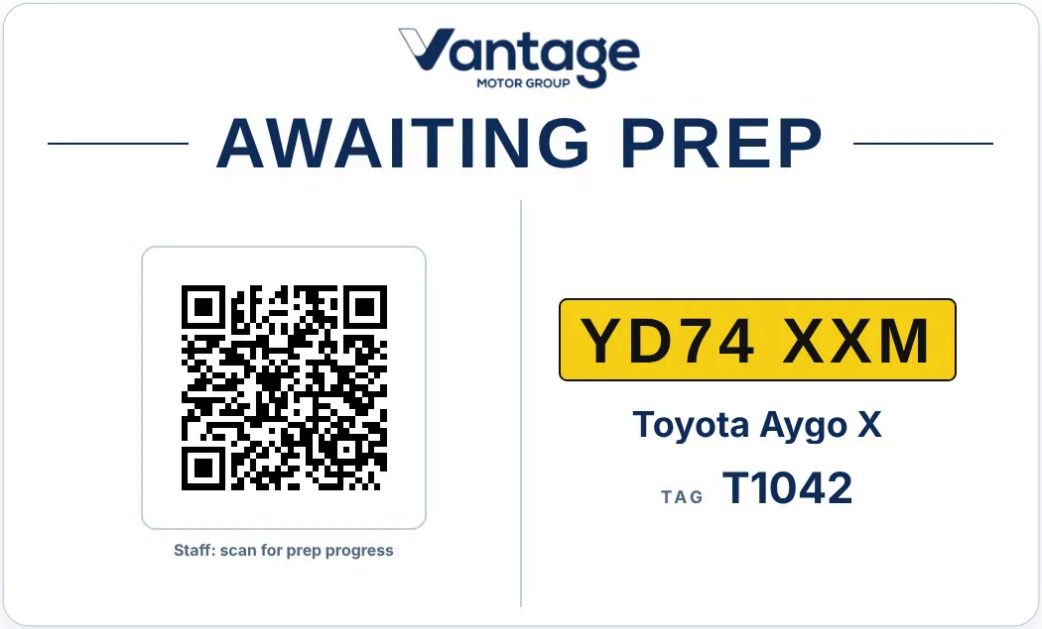

QR stickers and the Awaiting prep notice

Every car has its own QR code. Scanning it with a phone camera opens that car's progress after the person signs in, so advisors can check a car on the forecourt.

1. Open the car and tap **Print QR sticker**.
2. Choose a layout and tap **Print**.
3. Fit it, then tick **QR sticker fitted** on the Inbound stage.

In the print window, turn headers and footers off and keep the scale at 100%. The notice says the QR is for staff, so customers are not sent to a sign-in page.

LAYOUT	USE IT FOR	PRINT SETTINGS
Single label, 100 × 70 mm	Dashboard sticker with the Vantage logo	Margins None
A4 sheet, 8 per page	An office printer, then cut out	Margins Default
Small label, 50 × 30 mm	Label printers: QR, registration and tag only	Margins None
A4 landscape notice	A4 price board sign, fits a 28 × 17 cm window: AWAITING PREP, QR, plate, model and tag	Landscape, margins Default

AFTER PREP

Completed, archived and live updates

- **Completed**: a car moves here by itself once every box is ticked, including the final quality check. Until then it waits in the Quality Check box. Unticking a box sends it back to In prep.
- **Archiving**: open a completed car and tap **Archive car**. Cars are also archived automatically 30 days after they are completed, or 365 days after they arrived. Nothing is deleted, archived cars still count in Reports, and **Restore from archive** brings one back.
- **Live updates**: when someone else ticks a box, uploads a check or adds a car, a pop-up appears at the top of your screen within about 8 seconds. Tap it to close it. You never see pop-ups for your own changes, and only while the app is open.

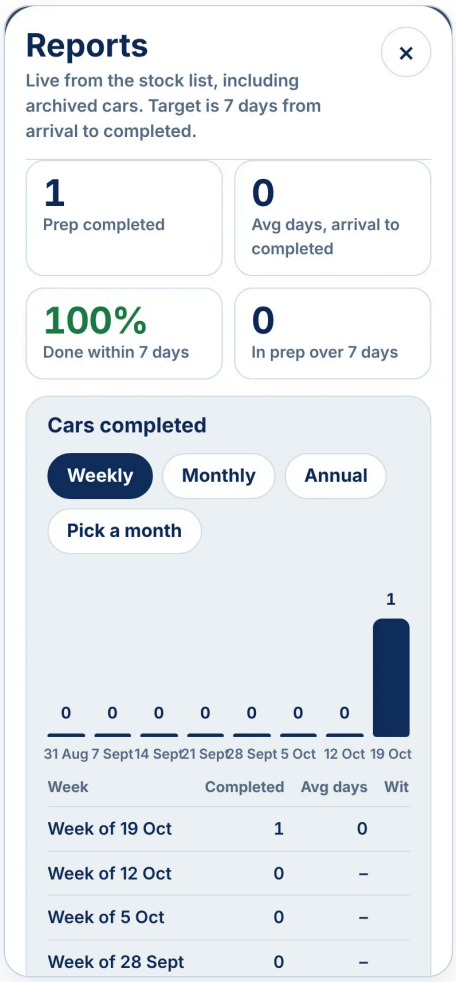

↑ Contents

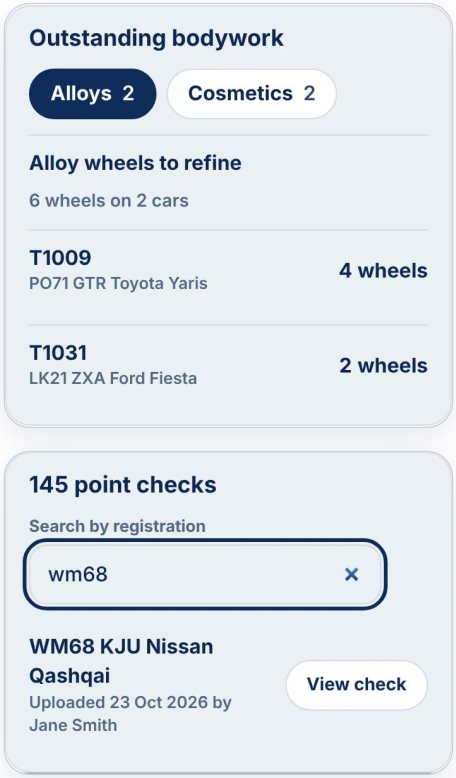

MANAGERS

For administrators

Tap **Reports** in the header. It updates live and includes archived cars.

- **Top figures**: cars completed, average days from arrival to completed, the share done within 7 days, and cars over target.
- **Cars completed** by week, month or year, or **Pick a month**.
- Where the stock is now, time in each stage, cars over target, cars sent back and sign-offs by person.
- **Outstanding bodywork** (near the bottom): **Alloys** lists cars with wheels to refine and the total; **Cosmetics** lists cars with notes and paint not done. Tag number first; tap a car to open it.
- **145 point checks** (at the bottom): type a registration to find and view its check.
- **Cosmetic costs** (beside it): shows how many cars in prep have a cosmetic estimate, the total, and what is still to do. Type a registration or tag to see one car's estimate line by line.

Staff logins

Tap **Account**, then **Manage staff logins**. Add a person with their full name, a username, a starting password and a role, then tell them the password in person. From the list you can change a role, reset a password, deactivate a login or delete it. Past sign-offs stay on the cars.

Cosmetic price list

Tap **Account**, then **Edit cosmetic price list** to change repair names, hours and prices, or add and remove repairs. Every estimate uses the new prices straight away.

Data health

Tap **Account**, then **Data health and recovery**. It shows that every 145 point check is stored and attached to its car. If a check is stored but not showing, tap **Reattach to their cars**. Removed checks stay in the **Recycle bin** for 30 days and can be restored. To bring back checks from an older copy, choose a downloaded backup under **Recover checks from a backup**.

Backups

Every night a full copy (cars, history, logins and every 145 point check) is sent to the company's own cloud storage and kept for 30 days. **Data health** shows when the last one went and has a **Back up to the cloud now** button. The app also keeps its own copy every day and before every update, and **Account**, **Download backup** saves a copy to your computer. Keep downloaded files somewhere private, because they include staff logins.

Daily prep email

Tap **Account**, then **Daily prep email**. Add who should get it (one email per line), pick the time and days, tick **Send the daily prep email** and **Save**. It shows cars in prep, what each department still has to do, cars over 7 days, cars awaiting QC, cars completed and MOTs due within 6 months. Use **Preview today's email** to see it and **Send test now** to try it.

Deleting a car

Open it and tap **Delete car** twice. This also deletes its 145 point check files and cannot be undone, so archive instead unless the car was added by mistake.

IF SOMETHING GOES WRONG

Tips and troubleshooting

PROBLEM	WHAT TO DO
Signed out	Sign in again with your username and password.
A change didn't save	Check your signal; a message appears if a save fails. Reopen the car and tick again.
An email didn't create a car	Check the registration isn't already on the system (including Archived) and that the reg is on its own line. Ask an administrator to check.
Upload refused	Files must be a PDF or photo under 15 MB. Take the photo at a lower quality or send a PDF.
Car in the wrong stage	A car sits at the first stage with an unticked box. Look for the unticked box in an earlier stage.
Notice prints on two pages	Choose Landscape, margins Default, scale 100%.
Check MOT shows an error	Type the MOT expiry by hand for now and tell an administrator. The message says what went wrong.
MOT appeared under Prep requested	The MOT runs out within 6 months, so it needs doing in prep. If the car doesn't need one, tap MOT to take it off.
Forgot password	Ask an administrator to reset it under Manage staff logins.

Advisors see the same screens as staff, with everything greyed out so nothing can be changed by accident. They can still use **Check MOT**. A **View only** login goes further: it also sees Reports and the cosmetic costs, for directors and visitors, but still can't change anything.
